Date: 16/05/2023

To Whom it may Concern,

It gives me immense pleasure to write this letter in support of Nithish Kadam K.G for his admission into the MS in Computer Science at your esteemed University. I have known him for almost 2 years as he directly reported to me during 2021-2023. I am confident Nithish will excel in this program and prove himself to be of great value to your institute.

He possesses an exceptional ability to think critically and logically and is able to quickly grasp our complex software architecture and apply them to practical problems. His programming skills are highly advanced, demonstrating his ability to solve complex problems with innovative solutions. Furthermore, Nithish's communication skills are excellent, and he is able to effectively articulate complex ideas. He is also able to work well in a team setting, displaying strong cohesion and the ability to work collaboratively with other towards a common goal.

Nithish has worked on several independent projects, which have been successfully moved into Clients' Production Environment. This further Showcases his exceptional abilities and our trust in his skills. These projects have required a high level of technical expertise and creativity, and Nithish has consistently demonstrated his ability to complete projects within given timeframes and to a high standard of quality. He was quick to understand the work requirements and directly interfaced with clients and customers from onshore countries to gather technical requirements and promptly provide them with required solutions. And as such the company has recognized his contribution and awarded him with multiple accolades namely The Above&Beyond award and The Star of the Quarter award for his exemplary performance in his time here.

I would like to highlight a couple of projects which were praiseworthy. First, would be an extension to process and create inbound and outbound messages. Here the messages are the interaction between two endpoints (the third party handlers and clients WMOS Systems) where the messaged received had to be processed to perform complex and intricate operations so as to be handled successfully. The second, Nithish and one of his teammates had to implement two-part section where the first section was a screen to import client's Excel sheets of barcode types to the database. The second section was to develop a framework to parse and perform validations on the barcodes scanned externally (which is composed of different data values), to identify the right data and its parameters then perform their own knotty web of tasks and actions totaling seven unique transactions and also update the right tracking information in the WMS systems. These were highly scaled and complicated projects that were glossed over at a low level to give perspective on Nithish's skills and abilities and our trust in him to deliver these key and complex projects.

At a personal level, Nithish is highly motivated, hardworking and dedicated. He possesses a strong work ethic and can meet deadlines without compromising the quality of work. These attributes make him an ideal candidate for the master's in computer science program at your esteemed Institute.

Keeping in mind all the above-mentioned qualities. I am confident That Nithish would be an asset to your Institution and excel in his endeavors. Hence, I strongly recommend him without any reservations. I wish him the very best for his future.
