

Education

Northeastern University, Boston ,MA

Sep 2024 - Dec 2026

Master of Science in Computer Science

GPA : **3.9**

Course work: Programming Design Paradigm, Algorithms, Foundations of Artificial Intelligence, Database Management Systems, Computer Systems, Natural Language Processing, Building Scalable Distributed Systems, AI coding

Technical Skills

Programming Languages: Java, C++, Go, Javascript, TypeScript, PHP, SQL, Swift, R

Framework & Libraries: SpringBoot, Hibernate, Node.js, Express, FreeMarker, Apache Velocity, EJS, React, JasperReports, createML, coreML

Database Technologies: OracleSQL, MongoDB, MySQL, SQLite, PostgreSQL, Redis

Tools & Technologies: AWS S3, AWS EC2, Cloudinary, GCP Pub/Sub, Git, Linux, Postman, JSON, RESTful API, FastAPI, Jira, Jenkins, Docker, Terraform, Kubernetes, RabbitMQ, Kafka, Grafana, Kibana.

Certifications: AWS Certified Solutions Architect – Associate

Professional Experience

Wintergreen, Portland, ME, US

June 2025 - Dec 2025

Full -Stack Developer Intern (Node.js, Express, TypeScript, React-Native, MySQL, AWS, JasperReports, PHP, Laravel)

- Built a production end-to-end PDF-reporting pipeline for HCRIS data—SQL shaping, Node.js/Express APIs and middleware, JasperReports templates, and a React Native UI with in-app PDF preview/download.
- Designed RESTful APIs and integrated third-party services to streamline clinical data flow for Legacy systems in Php and Laravel.

Manhattan Associates, Bangalore, India

Sept 2021 - Nov 2023

Software Engineer (Java, C++, JavaScript, Hibernate ORM, SpringBoot, PL/SQL, RabbitMQ, Kibana, Grafana, Docker)

- Built a real-time message processing framework using Java/Spring Boot, C++, RabbitMQ, PL/SQL to handle WMS communication with MHE, host to third-party systems, reducing end-to-end communication latency by 30%.
- Developed complex modifications across Waves, RF transactions, Receiving, MHE, Picking, Packing, Shipping, and Printing modules, including reports, labels, and elaborate stored procedures for client customizations.
- Migrated underlying integration architecture from SOAP-based API calls to REST-based JSON messaging and contributed to Configurator UI modules in MAWM, improving system modularity and configurability.
- Resolved 150+ issues across 30+ client deployments spanning both classic and platform versions of WMOS and MAWM.
- Recognized with the "Above & Beyond" and "Star of the Quarter" awards as an acknowledgement of my performance.

Manhattan Associates, Bangalore, India

Aug 2021 - Sept 2021

Technical Analyst - Internship (Java, Hibernate ORM, SpringBoot, SQL, Shell script)

- Developed automation scripts for internal servers, boosting operational efficiency and reducing manual intervention.
- Designed and implemented two RF screens with a supporting framework and navigation for inbound transactions, improving data handling and processing speed by 40% while utilizing Java and Spring Boot.

Personal Projects

Arcanum-The Ten Trials -  (React, Three.js, Tailwind, FastAPI, PostgreSQL, Supabase, Sentence-Transformers)

- Co-built a story-driven puzzle CTF platform (10 levels, mythological narrative) with React, Three.js, Tailwind on Vercel; FastAPI backend with JWT auth, OTP email(Brevo), PostgreSQL/Supabase, sentence-transformers for answer proximity scoring, and a speed-ranked leaderboard.
- Owned 3 trials end-to-end (one easy, one medium, one hard) — concept, narrative, visual design, puzzle logic, and answer validation. Event drew 120+ registrations, 90+ concurrent users, and 12K+ submissions in the first 10 hours.

CityDiaries -  Demo NodeJS, Express, MongoDB, EJS, CSS, Cloudinary)

- Full-stack travel diary platform for logging visited places, exploring hotspots, leaving reviews, and getting directions. Integrated Cloudinary for image uploads and MongoDB for data persistence.

WarehouseFlow -  (Go, Kafka/Redpanda, Redis, PostgreSQL, Terraform, AWS ECS/MSK/RDS/ElastiCache)

- Built a distributed order-routing engine handling 5k orders/min at 33ms P99 latency. Validated resilience via 7 scale/failure experiments, achieving zero data loss during failover and 20s recovery from network partitions.
